

PROJECT OVERVIEW

Investment: \$10 Billion

Jobs: At Least 1,000

MCEDA is pleased to announce a new, large scale economic development project that will build multiple data center campuses in Madison County. This will be the largest economic development project in the State of Mississippi. This will be the first data center project of this scale in the State of Mississippi. Madison County was selected for its site readiness, power availability, and its speed to market.

ABOUT AWS:

- A global leader for innovation in cloud computing.
- Committed to strengthening the communities where it operates by supporting programs benefiting residents, families, and businesses alike.
- A proponent of environmental stewardship, with a goal to reach net-zero carbon by 2040 and a commitment to be water positive by 2030.
- Invests in local tech up-skilling by providing ready-to-teach cloud computing curriculum for school-aged children.

Impacts for Madison County:

- ✓ Will receive an increased annual revenue for the school districts and county from the \$10 Billion investment commitment
- ✓ Will receive a \$200 million loan for investment in critical infrastructure including roads, water, and wastewater providing improvements for current and future residents
- ✓ Will add reclaimed and greywater to support the project, greatly reducing the amount of water discharged

Impacts for the State of Mississippi:

- ✓ Largest economic development project in the State of Mississippi and larger than all previous major economic projects combined
- ✓ Will support job creation and additional investments for Entergy MS throughout its territory
- ✓ Mississippi State University & Holmes Community College will serve as partners in the company's workforce training program
